

# Bmp2paK

## User instructions

### 1 – Everything

Bmp2paK is a program that will let you create .pak files for use with GpFinalWar. Hit Add files to add a bunch of files to the pak. When your pak file is complete, hit Save .pak to save the pak file to disk.

IMPORTANT: You can't add more than 80 files at a time. This is because of this fucked-up file selector... Also avoid adding 2 times the same file.
